1- seq2seq models

A Seq2Seq (Sequence-to-Sequence) model is a type of neural network architecture designed to transform one sequence into another. It is widely used in natural language processing (NLP) tasks such as:

- Machine translation (e.g., English → French)
- Text summarization
- Speech recognition
- Chatbots and question answering

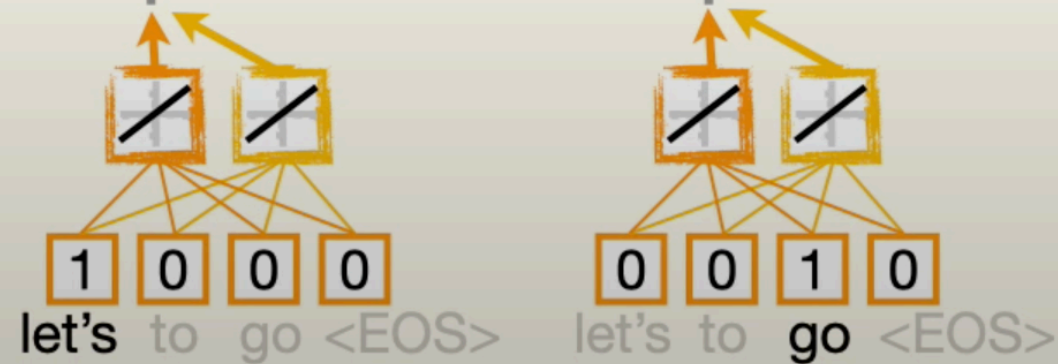

Lastly, let's talk about the differences between this super simple **Encoder-Decoder** model...

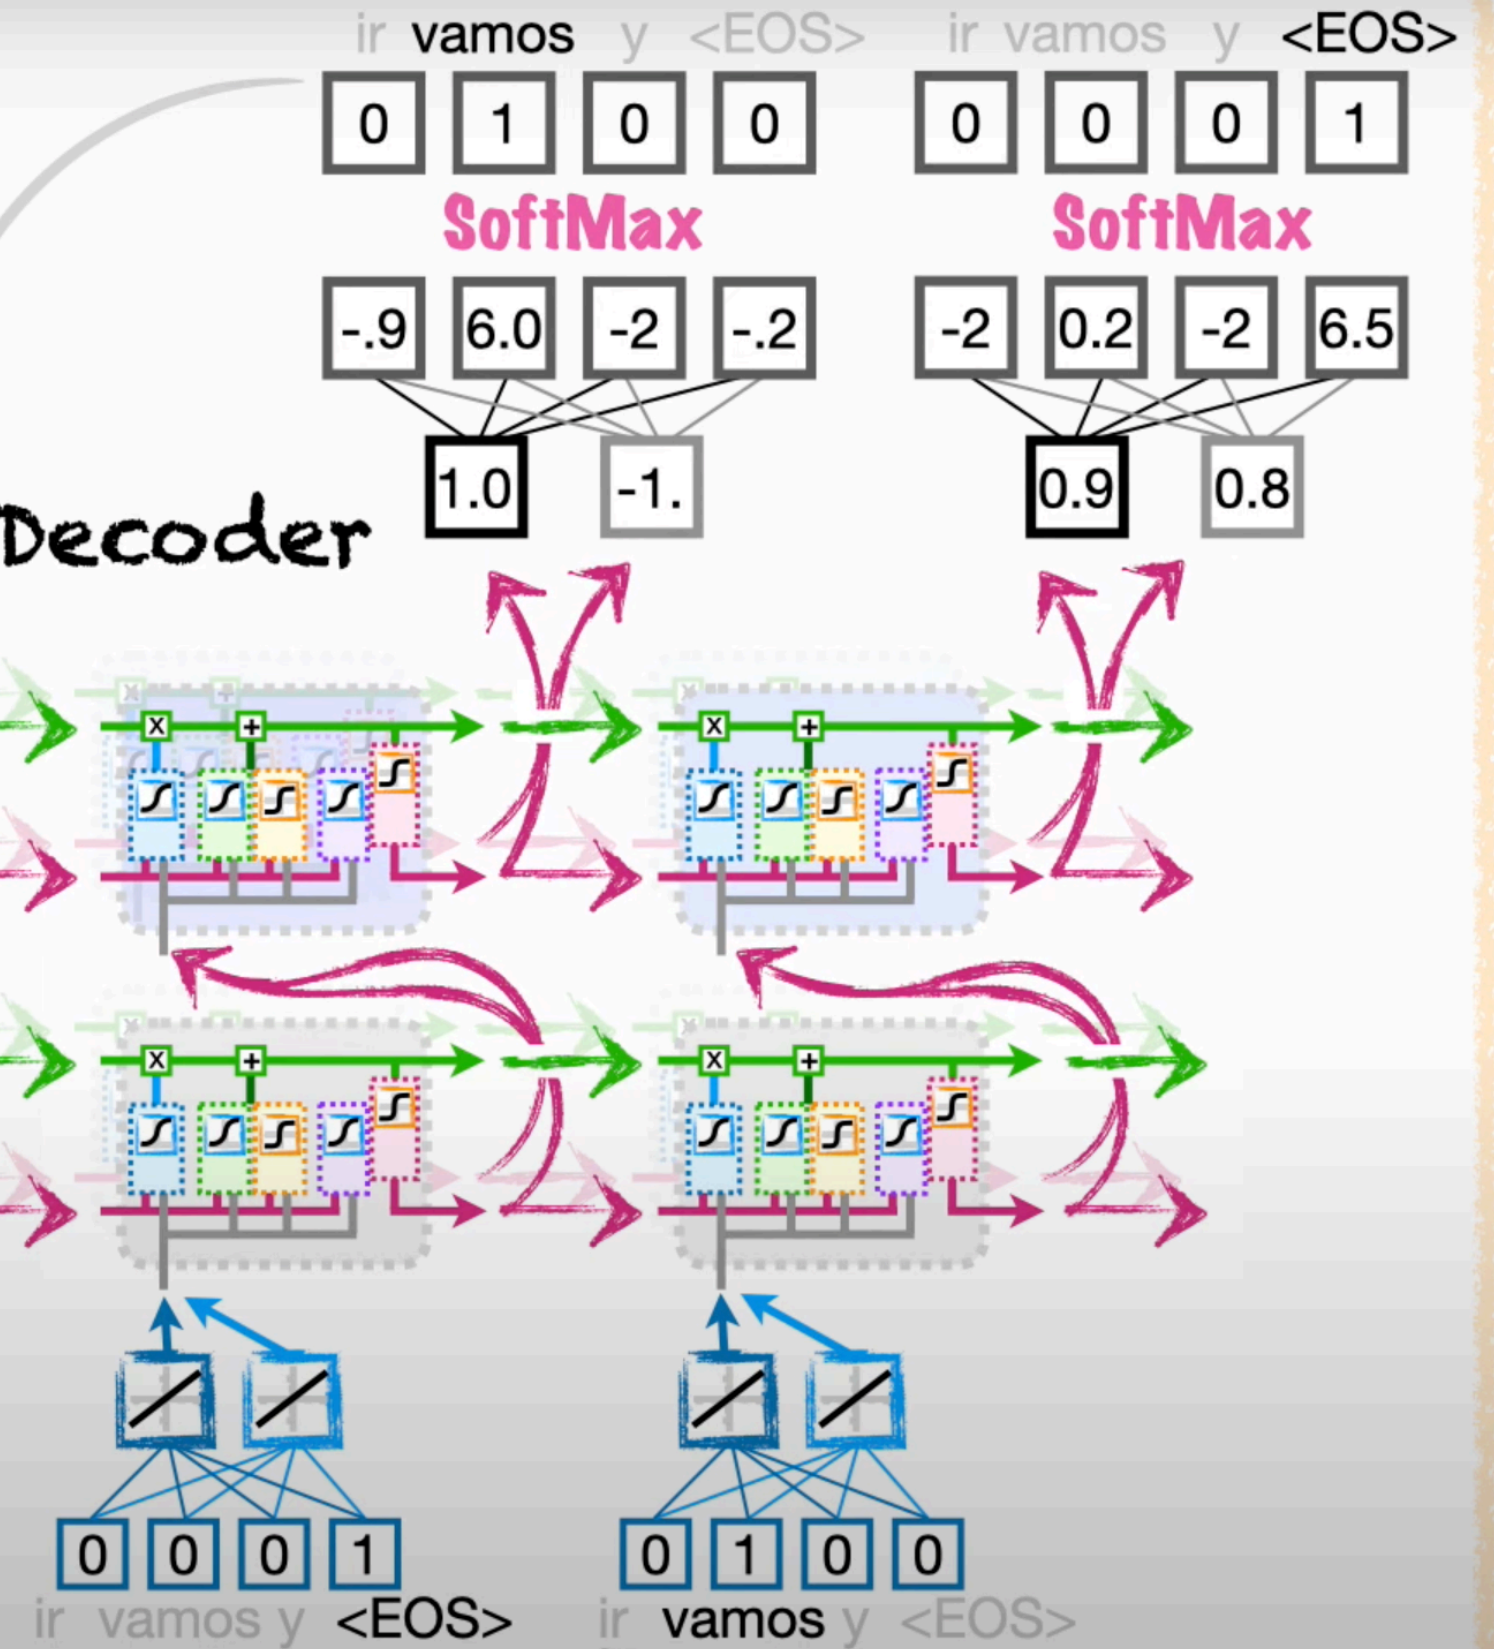

Encoder

Layer 2

Layer 1

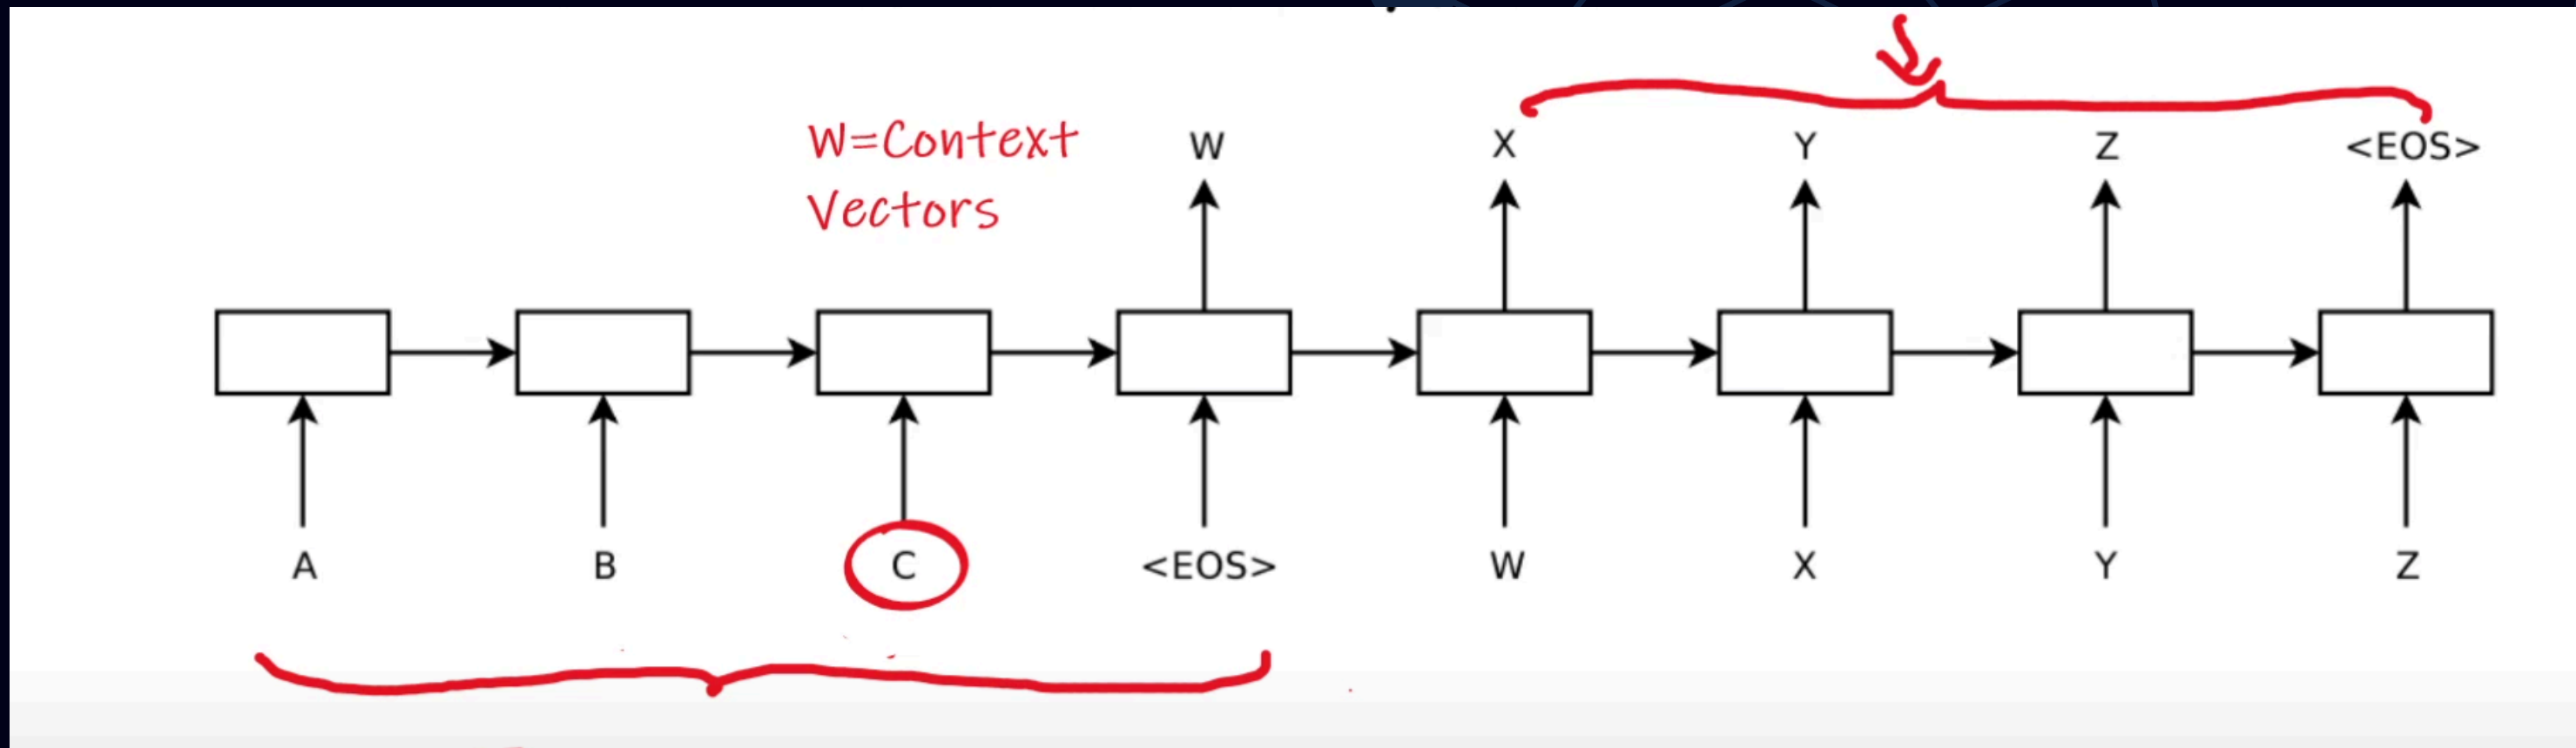

Decoder

2- problems of encoder decoder

Difficulty with Long Sequences

3- Attention Models
